

## MULTIPLE RINSES

- Lower water consumption
- Smaller overall area dedicated to the plating plant

### Counter current multi-rinse (central panel program)

Phase 1: Barrel placed into rinsing tank

Phase 2: Barrel exterior washing by means water coming from tank C (about 10 L)

Phase 3: First rinse water sent back into treatment tank or to the water treatment plant

Phase 4: Second rinse by immersing the barrel with water C (about 220 L)

Phase 5: Returning of water to C

Phase 6: Third rinse by immersing the barrel with water B (about 220 L)

Phase 7: Returning of water to B

Phase 8: Reestablish water level into tank B.
